

Date	Change
10/1/2019	New version of VPro released as beta
10/2/2019	Code to enable succession projects removed. No one had used that code in over a decade.
10/7/2019	Create the import functions from VPro 15 formats
10/15/2019	Plot profiling changed to capture plots where a specified species is not present
10/16/2019	Metadata collection standards updated
10/21/2019	System References button added to the About form
10/21/2019	Data form revisions take place from this date until the second coming
11/21/2019	Code provisions in place to target reference locations for a specific server.
12/11/2019	USysAllSpecs table updated
12/13/2019	Updates to functions" compare to template, Import VPro 13, Import VPro 15, Rename project, Delete project, Splinter, Merge, Export to VPro 13, Veg profiling
12/14/2019	Removed the export to VENUS and VPro 97
12/15/2019	Removed the import VPro XP
12/16/2019	The drop down list for Project ID now shows the currently entered IDs rather than the set list of types.
12/16/2019	Fix problem with Env Into SU tool
12/18/2019	New USysAllSpecs
12/18/2019	Updated project types for metadata project ID
12/18/2019	The export plot locations now exports a negative longitude
12/20/2019	Fixed a problem with the create site units from environmental fields function
12/22/2019	A new set of units and new table structure for the MasterSiteUnit list. It contains names for any correlated Site Series and should match to units that we put in the BEC Master unit field. Added in an ID field and the Level field from the old structure (all the units the database attached will be 11). But no other info like parent, date, source, nplots, seral code, etc.
12/27/2019	The changes to the MasterSiteUnit list triggered a firestorm of changes to VPro.
12/30/2019	Fixed problem of ENV into SU on the 2-page form
1/13/2020	New USysAllSpecs
1/14/2020	Changed the long/lat number type from single to double.
1/15/2020	Fixed some code that didn't allow spaces in project names when merging two projects.
2/20/2020	VPro now has the added ability to store the path of the current project. It can use this path when it finds a discrepancy between the selected project and the underlying data.
2/26/2020	Added an option to the data entry form for the user to make the form sizable with scrollbars.
2/27/2020	Fixed a bug in the Su into Env function. VPro was asking for information on a field that had been renamed in the VPro 19 version.
3/11/2021	Fixed project backup problem
3/12/2021	Fixed problem where VPro sometimes forgot to add an Admin record when adding an Env record. This change was made to all the FS882 forms.

Date	Change
6/30/2021	Fixed a problem where a species code error was being reported when entering herb data into the data form.
10/18/2021	Fixed a problem with data entry where VPro crashes when entering data in an order where the Admin data tries to save a duplicate plot number.
10/18/2021	Updated Diagnostic xla code to correct a reporting error.
1/22/2022	Fixed a problem with the "Save As" function.
3/4/2022	Fixed(?) a problem where VPro would freeze when the PlotNumber form field would lose focus when there wasn't a plot. Weird.
3/7/2022	Fixed error in summary report when using the constancy option
3/11/2022	Trapped error when user tries to create a short veg report without a su table
3/30/2022	There is now a "BEC Use" filter option in the short veg report options.
4/02/2022	Updated the diagnostic xla file to correct errors in how it was saving user information. Updated the short veg BEC Use option to use >= in the criteria.
4/13/2022	Modified the SU tab on the short veg report to clearly show which plots were not included and the quality criteria involved in making that decision.
7/21/2022	VPro now comes with an Excel xla diagnostic file that works with both 32 and 64-bit versions of Excel.
1/31/2023	Fixed a problem that was slowing veg data entry in forms.
2/1/2023	A new VLists database was created by Will
2/23/2023	Metadata project ID selection now has option of selecting from the master or the env table. Other refinements on metadata management have been made.
2/23/2023	A bug in the way VPro checked for the USysTableOfLists version has been fixed.
